## **Cat World**

My project is about cats named Fishy and Sunny. Fishy and Sunny have characteristics that will print out and it will show their age, if they are sleeping, name, climbing, and if they ate yet. On the last printed line it will show that the Cats are saying "Meow meow >3" or "Hiss hiss reowwww!!!!" this just means that they got fed or they got mad and started to hiss. My project also has ASCII are that some I have made myself but two them I tried making it instead of copying it from directly from the source.

## Helpful tips & tricks

- 1. <a href="https://www.asciiart.eu/">https://www.asciiart.eu/</a>
- 2. <a href="https://stackoverflow.com/questions/4008223/print-in-new-line-java">https://stackoverflow.com/questions/4008223/print-in-new-line-java</a>
- 3. https://stackoverflow.com/questions/40422607/how-to-add-backslash-to-a-string

## <u>Description of idea for future project development:</u>

- a) The features that I did not have enough time to develop is putting more cats in and actions that it can do.
- b) The components that can be more efficient or clear is to have everything centered and formatted correctly.
- c) Some cool ideas that I have for extension or application that I have is to add maybe a user input so that the user can make their own judgements so they can feed that cat.

Screenshot of my output for CatWorld.

```
run:
CATS
